Introduction

We started our journey to answer the simple question: What would happen if a cryptocurrency project was 100% run by its community? While Defi includes the word decentralized, this is about economic status instead of its internal hierarchy. Our founder had a clear vision from the beginning of the project, "We are an ideal experiment in decentralized instinctive community building." In contrast, we could not have imagined this, and this was a concept that would start a revolution.

The RDM token ecosystem is a way to recognize the importance of deconstructing this long-established paradigm. Communities are held together by hundreds, if not thousands, of interconnected moments. We have realized that true strength does not come from us alone.

VISION

RDM TOKEN is an ambitious project dedicated to establishing a truly decentralized Internet and its infrastructure to enter the new World of web 3.0. The RDM TOKEN is based on the BINANCE Blockchain system, one of the most extensively used blockchain systems in the World.

OUR MISSION

To build the most passionate & viral community in crypto till now and has its electricity-free mining crypto token sustainable environment and create a better place to live.

RDM, the official cryptocurrency of RDM
Gaming based on BEP-20 TOKEN.

RDM TOKEN

WWW.RDMEXCHANGE.COM

ARCHITECTURE

RDM Token adopts a 3-layer architecture divided into Storage Layer, Core Layer, and Application Layer.
The RDM Token BEP-20 adheres to Google Protobuf, which intrinsically supports multi-language
extension.
Application:
-dApps
-WalletCore:
SDK-Smart Contract
Wallet API-Account

Storage:
Distributed Storage Protocol
-State Storage
-Chain Storage
-GRPC

PROTOCOL
-JAVA
-SCALA
-C++
-PHYTON
-GO

RDM CONTRACT ADDRESS

0xc3ede75cdcbfabab9a04d88637e42a9d71c7cde5

WE LOVE RDM TOKEN

We are proud of where the RDM Army originated and equally excited for our future. Our founder chose to start RDM from nothing and gave the direction of the currency to our army. Beginning with nothing means everyone has to bring something innovative to the table. The stakeholders and believers in our RDM Army have been the source of all our success. You and more than fellow holders, admins, mods, leaders of international chat rooms, social media influencers, meme makers, and most of all, Friends. THANK YOU. You are the real RDMARMY, and we salute you.

PROOF OF WORK

Using a proof of stake for cryptocurrencies is a hotly debated design decision. However, we decided to accept it because it adds a mechanism to introduce secure voting, offers more scalability, and allows for more exotic incentive schemes. This modularity lets in for delegation, sidechains, subscribable checkpoints, higher records systems for mild clients, exclusive styles of random variety generation, or even only synchronization assumptions. As networks evolve from thousands to millions to billions of users, their consensus algorithm requirements also change. Therefore, it is essential to be flexible enough to accommodate these changes and future-proof the heart of cryptocurrency.

RDM BEP-20

A standard of a crypto token on the BNB platform. Specific rules and interfaces are required when holding an initial coin offering on the BINANCE SMART blockchain

SCRIPTING

Starting with the scripting language, transactions between addresses in a ledger require some script to execute and be proven valid. Ideally, one would not want Eve to access Alice's money, nor would one like a poorly designed script to accidentally send value to a dead address making the funds irretrievable. Systems such as Bitcoin provide an extraordinarily inflexible and draconian scripting language that makes it difficult to program bespoke transactions and to read and understand. Yet the general programmability of languages such as Solidity introduces an extraordinary amount of complexity into the system and is helpful in only a much smaller set of actors

WHAT IS THE POINT OF ALL OF IT?

RDM has been a marathon project involving feedback from hundreds of bright minds inside and outside the cryptocurrency industry. It involves tireless iteration, the active use of peer review, and shameless theft of great ideas when uncovered

OUR VISION

01
Think Clearly

We consider clarity of thought to be the most necessary trait we look for in our colleagues. We look concise and articulate, putting effort into making things simple and easy to understand.

02
Be Resourceful

We always find a solution to get things done with what's available in real-time, but we aren't afraid of asking for help when needed. We believe great ideas can come from anywhere, regardless of seniority and experience.

03
Vision Big

We think big, take intelligent risks and do things that have never been done or approached. We aren't afraid to make tough choices that align with our long-term objective and also understand that it seems impossible until it's achieved.

04
Remain Humble

We don't seek the attention but instead focus on doing what is best for the company and the users. We think smartly before spending but are aggressive regarding investing in what matters the most.

RDM ROADMAP

2022 - FEB
- Project Planning meetup
- Launch Website
- Partnerships with gamers

2022 - MARCH
- Launch of whitepaper
- Development of RDM gaming protocol

2022 - JULY
Token Launch on binance smart chain

2022 - DEC
Launch our first game verification bscscan.org

2023 - FEB
- Game integration with RDM token
- launch 2 games with RDM integration

2023 - APRIL
Partnership with metaverse

2023 - AUG
RDM NFT launch

RDM TOKEN

CONCLUSION

Crypto technology has a bright future but also needs some changes that would fit the community's demands. The cryptocurrencies floating in the market have issues like scalability and high transaction cost and aren't decentralized. With innovation and community building at our core, the RDM token is focused on developing blockchain technology operated by its community. The idea of a secure and safe profitable financial protocol for investors.
